PennyWise AI

AI-Powered Financial Management for University Students

"Take care of your pennies, and the bag will take care of itself."

PennyWise helps students understand where their money goes, build better spending habits, and make smarter financial decisions — designed for students on allowances, student entrepreneurs, and young adults learning financial responsibility.

Made with GAMMA

Welcome back, Prosperi! 🙌

Here's what's happening with your finances today.

You've spent **₦10,000** this month

Monthly Budget: ₦50,000 | 0% utilized

Spending by Category

What PennyWise AI Does

A complete financial platform — tracking, analytics, and AI-powered insights in one place.

Financial Management

Income tracking, expense logging, budget monitoring, and financial reports.

Analytics

Spending trends, category breakdowns, and monthly summaries.

AI Features

Smart categorization, spending insights, budget recommendations, and bank statement analysis.

Technical Implementation

Built with modern, industry-standard tools — clean architecture from frontend to database.

Frontend

React · Next.js · JavaScript ES6 · Tailwind CSS

- Dashboard, Transactions, Budgets
- Reports, Profile & Settings
- Authentication Pages

Backend

Node.js · Express · TypeScript

- Auth, Transactions, Budgets
- Reports & User Management APIs

Database & Deployment

Neon PostgreSQL with Prisma ORM

- Frontend → **Vercel**
- Backend → **Render**
- Database → **Neon**

How We Built PennyWise AI

A structured, end-to-end development process — from problem discovery to live deployment.

We started with real student problems, defined clear system requirements, designed interfaces in Figma, built features independently, and shipped a fully tested product.

Team Structure & Responsibilities

Team Lead — Feyifoluwa

Project direction, PRD creation, task delegation, and repository workflow.

Backend — Tobani & Kelvin

REST APIs, backend logic, TypeScript services, and database integration.

Frontend — Rebecca, Roy & Pascal

React pages, reusable components, and frontend-backend connections.

QA & Docs — Sochi & Korede

Feature testing, bug identification, documentation, and README.

DevOps — Prosperity

Database setup, deployment architecture, environment config, and Vercel/Render integration.

Git Collaboration Workflow

How We Collaborated

A clean branch-and-merge workflow kept our codebase stable and contributions traceable.

Branch Structure

frontend/*

backend/*

qa/*

devops/*

✔ Reduced merge conflicts, easier debugging, and clear contribution tracking across the team.

Technical Challenges & How We Solved Them

Team Collaboration

Coordinating contributors and managing merge conflicts. **Solution:** Enforced Git workflow with clear task ownership.

Integration Challenges

Frontend-backend communication and API consistency. **Solution:** Regular integration testing and shared documentation.

Deployment Challenges

Environment variables and cross-platform debugging. **Solution:** Structured environment config and staged rollouts.

FINAL INTEGRATION

Final Integration & Polish

Led by **Tobani**, our senior developer ensured every piece of the system worked together seamlessly before launch.

- ✓ Result: A fully deployed, working full-stack financial management application.

- Integrated frontend & backend components
- Reviewed and refined system architecture
- Resolved integration issues and bugs
- Ensured system stability for final release

Future Roadmap

What's next for PennyWise AI — smarter features, mobile access, and deeper financial intelligence.

AI Enhancements

Personalized financial coaching, smarter budget recommendations, and predictive spending analysis.

Financial Features

Bank statement upload, automatic transaction extraction, and savings goals.

Platform Growth

Mobile application, notifications & reminders, financial health score, and expense forecasting.

PennyWise AI — Thank You

A fully deployed, full-stack financial management platform built by students, for students.

What We Demonstrated

- Planning & Research
- Team Collaboration
- Git Workflow
- Full-Stack Development
- Cloud Deployment
- Database Integration
- Documentation & Testing

Tech Stack

React · Next.js · Node.js · Express · TypeScript · Prisma · Neon
PostgreSQL · Vercel · Render

Questions & Answers
